How does Microsoft 365 Copilot work?

Overview

Microsoft 365 Copilot

Embedded across Microsoft 365 apps

Copilot in Word

Creating a new document with Copilot in Word

Creating a new Word document with Copilot in Word

- Start Microsoft Word and start **new Blank Document.**

- Enter the ***Prompt:***

“Write a new document on the cost, benefits, and considerations for installing solar panels on homes. Provide an introduction at the beginning of the document and a summary at the end of the document. Include a table of contents”

Modifying an existing document with Copilot in Word

Modifying an existing Word document with Copilot in Word

- Once the document is created, click on the Copilot button at the bottom right of the document.
- Enter the prompt:

"Add a check list to the bottom of the document for a new homeowner."

Analyzing an existing document with Copilot in Word

Ask Questions about the Document

- At the bottom right of the **Contoso Marketing Plan file**, click on the **Copilot Icon**
- Example 1 **Prompt**:
"What is the target market for Contoso"
- Example 2 **Prompt**:
"What are the marketing strategies for Contoso"

Summarize a Document

- In the same document, navigate to the top of the document.
- Click on the **"Summary by Copilot"** button.
- Copilot will create a summary for you. You can further dig into this summary as needed.

Ask Questions about the Document

- Navigate to the end of the document and **select** the last paragraph
- Right click on the paragraph. **Copilot to the left** of the highlighted text and choose “**Edit with Copilot**”
- Choose the response option as needed (Auto Rewrite, Make Shorter, or Structure & Refine).

Tips for editing with Copilot in Word

Tips for editing with Copilot in Word

Tips for editing in Word

- Start with a clear intent—describe your desired outcome, not every step.
- Use natural language; Copilot understands your work context and knows if you want to ask questions, iterate in chat, or execute in your Word doc.
- Draft from scratch or create from existing documents.

Well-constructed prompts should include:

1. State your intent or goal (rewriting, formatting, iterating, etc.).
2. Copilot in Word leverages WorkIQ, giving you the option to share specific work context either indirectly (ie. "Draft from the latest work emails with my manager") or directly (ie "Draft from the /Manager email", with "/" to find and include specific files, meetings, emails).

Create from scratch (Word Agent or Edit with Copilot)

Update on an event

Generate a report on announcements and themes from Microsoft Ignite 2025 event and draft a podcast script (5–7 minutes) that explains these highlights in a clear, engaging tone for a tech-savvy audience.

Build a report

Write a report summarizing emerging trends with agentic AI and new jobs opportunities. Focus on the last 12–18 months and the next 12–24 months. Cover enterprise and regulated environments first, then consumer where relevant.

Evaluate methods and tradeoffs

I'm evaluating two approaches (collaborative filtering vs. deep learning models) for building an AI recommendation system for e-commerce. Analyze them across business value, technical feasibility, risks, and long-term ROI. Present your findings in a decision-support whitepaper that will guide a leadership conversation toward selecting the right option.

Social media trends

Create a report evaluating the trends of influencer and social media advertising

Edit with Copilot in Word

Turn a meeting + email thread into a decision log

In the section titled "[sectionname]", create a Decision Log table with columns: Decision, Options considered, Pros, Cons, Owner, Date, Next step. Populate it using what was decided in the [/Projectupdate meeting] and the email thread with [/person] about [topic]. Keep existing wording where possible—only rewrite when clarity is needed. After the table, add a short "Open Questions" list of anything still unresolved.

Refresh a recurring monthly exec report

This is last month's executive update. Help me update the entire report with this [month] updates by pulling the latest from my recent team emails and Teams chats. Remove last month's updates and replace them with the newest ones. Only edit the last 3 columns of the table; update status with an appropriate icon (green = on track, yellow = at risk, red = off track). If a status is not on track, explain why in the "latest developments" column. Apply all new text updates in blue font.

Do a one-shot formatting and polish pass

"Make the structure and formatting consistent and easy to scan—fix heading hierarchy, spacing between sections, fonts, lists, and tables. Add a simple Contents section at the top that reflects the current sections (it doesn't need to auto-update). Reorganize any long or messy sections into clearer chunks using subheadings or tables where helpful. Align the tone and formatting with recent proposals or reports I've worked on so it matches our usual style. Tighten up wordy sections, flag places where the structure could be clearer, and sanity-check any market, customer, or competitor claims with current high-level info where it's easy to do. The goal is a clean, professional document that's ready to share without additional formatting or structural edits.

Ask and iterate

"How can I clean up the language and effectiveness of this content and be better aligned with /Brand guidelines email?."

Q&A
